Executive Summary

This project analyzes 522 synthetic customer complaint tickets to identify the most frequent issues, compare service performance across subcategories, and map each issue to its likely root cause.

- Damaged / Leaking Product is the most reported issue, with 122 tickets.
- Order Not Received has the lowest CSAT at 2.7 and the longest average resolution time at 24.02 hours.
- Delivery is the largest mapped root cause category, accounting for 181 tickets.
- Lower-volume issues can still create a disproportionately poor customer experience.

Issue Category Breakdown

Complaint volume by issue subcategory shows where the most recurring customer friction occurs.

- Damaged / Leaking Product is the most reported issue, with 122 tickets.
- Late Delivery follows closely with 113 tickets, making delivery-related complaints another major area of concern.
- The two largest complaint categories account for 235 of 522 tickets.
- Complaint volume alone does not show the full customer impact, so CSAT and resolution time need to be considered next.

What Needs Attention Most

Complaint volume, CSAT, and resolution time point to different types of customer impact.

DAMAGED / LEAKING PRODUCT

122 COMPLAINTS · CSAT 3.4 · 14.76 HRS

Highest complaint volume, making it the most recurring issue by frequency.

ORDER NOT RECEIVED

68 COMPLAINTS · CSAT 2.7 · 24.02 HRS

Lowest CSAT and longest resolution time, making this the most critical customer experience issue.

LATE DELIVERY

113 COMPLAINTS · CSAT 3.4 · 17.17 HRS

High volume combined with a longer resolution time suggests a significant operational pain point.

REFUND / REPLACEMENT ISSUE

65 COMPLAINTS · CSAT 2.9 · 23.60 HRS

Lower volume, but poor satisfaction and long resolution time indicate a disproportionate customer impact.

HIGH COMPLAINT VOLUME DOES NOT ALWAYS MEAN THE HIGHEST CUSTOMER IMPACT.

Root Cause Priorities & Next Steps

The analysis points to four operational areas where improvements could reduce recurring customer friction.

01 DELIVERY 181 tickets

STRENGTHEN DELIVERY TRACKING AND ESCALATION.

Tracking failures, courier delays, and delivery exceptions make Delivery the largest mapped root cause category. Clearer escalation paths and SLA ownership should be the first focus.

02 FULFILLMENT 154 tickets

TIGHTEN FINAL ORDER VERIFICATION.

Missing and wrong item cases suggest gaps before handoff. A final item, SKU, and quantity check could help reduce preventable fulfillment errors.

03 PACKAGING 122 tickets

REVIEW PACKAGING AND HANDLING STANDARDS.

Damaged and leaking product complaints indicate inconsistent protection during packing or handling. Sealing and protection checks should be reviewed.

04 PROCESS 65 tickets

CLARIFY REFUND AND REPLACEMENT OWNERSHIP.

Refund and replacement issues point to workflow ambiguity. Clear ownership, turnaround expectations, and escalation steps could make resolution more consistent.

PRIORITY SHOULD BE BASED ON BOTH COMPLAINT FREQUENCY AND THE CUSTOMER EXPERIENCE BEHIND EACH ISSUE.
